

# Pharma-Corp drug guidelines

## Insulin

**Document ID:** SOP-145

**Title:** Line 1 Operations - Biologics and Liquids

**Department:** Manufacturing (Line 1)

**1. Line 1 Cleaning Protocols** Between distinct drug runs, the holding vats must be flushed with 70% Isopropyl Alcohol for exactly 45 minutes, followed by a sterile water rinse.

### **2. Product: Insulin-X (INS-X)**

- **Standard Batch Volume:** A standard weekly batch yields exactly 5,000 units.
- **Storage and QA:** Insulin-X must be stored in holding vats between 2°C and 8°C prior to bottling.
- **Temperature Excursions:** If the holding temperature drops below 2°C for more than 60 minutes, the molecular structure is permanently compromised. The batch must be flagged as "SCRAP\_CRITICAL".
